

Let's Talk Tox!

DAXXIFY®

DAXXIFY® is FDA approved to smooth moderate to severe lines between the brows. It is the only frown line treatment powered by a peptide.

The active ingredient in DAXXIFY® is a purified protein called botulinum toxin type A.

Dysport®

Dysport® is a brand of the neuro-muscular blocker AbobotulinumtoxinA. This injection treats severe muscle spasms in your neck, calf, elbow, wrist and fingers. It can also treat frown lines between your eyebrows.

Jeuveau®

Jeuveau® (prabotulinumtoxinA-xvfs) injection is an FDA-approved prescription medicine used to temporarily improve the look of moderate to severe frown lines between the eyebrows (glabellar lines) in adults.

What is the difference between fillers and neurotoxins?

Neurotoxins or neuromodulators help reduce frown, forehead, and crow's feet lines in the upper region of the face. Fillers add volume to help soften and smooth wrinkles and folds in the lower regions of the face.

During your appointment, providers often assess both your upper and lower face when making treatment recommendations. Neurotoxin and filler treatments can be part of a full, tailored plan to help you achieve your desired results.
